## WATERPROOF AMPLIFIER ROCKS OUT WITHOUT BATTERY DRAIN

Now, boaters and personal watercraft (PWC) enthusiasts can enjoy the day out on the water even more with their MP3 players, marine stereos or satellite radio. Watercraft Innovations introduces its new Full Wave Audio Waterproof Stereo Amplifier that's completely submersible and has a low power draw of less than three amps, making it the most efficient amplifier on the market. This robustly designed amp is IP68-rated and comes with the industry's only three-year unconditional replacement warranty.

Designed specifically for applications where battery capacity is limited, this durable amplifier allows users to easily enjoy music for long periods of time while out on their boats, PWCs, kayaks, canoes or ATVs. Featuring digital amplification, it boasts a true 18 W per channel, performing equally to a traditional 80 W unit. Offering crisp clear sound, it has to be heard to be believed.

The remote sealed push buttons let owners easily control power, volume and a mute function from any convenient location. The small profile of this amplifier allows mounting where others can't.

With the Full Wave Audio Amplifier's polyurethane encapsulation, there is no need to worry about corrosion, salt water or vibration. The

-more-

MP3 connection has a gold-plated 3.5 mm jack and only marine grade wire is used to further withstand harsh marine conditions.

The system comes standard with 15' of PVC jacketed battery leads, 15' of speaker wire leads and a 6' source line. Watercraft Innovations' Full Wave Audio Waterproof Stereo Amplifier has a suggested retail price of \$307.60.

Watercraft Innovations is a leader in ground-breaking watercraft product development. Offering waterproof audio systems through Full Wave Audio, its other branch PWC Industries developed a unique patented braking system and Safety Alert Lights for PWCs and boats.
