

NEWLY PATENTED SAFETY ALERT SYSTEM MAKES SPORTS VEHICLES SAFER

Boats and personal watercraft, as well as ATVs and other sports vehicles can decelerate suddenly and without warning, potentially leading to dangerous collisions. To create a safer recreational environment on water and land, PWC Industries Inc. introduces the ground-breaking Safety Alert System. Its bright LED light notifies other outdoor enthusiasts of a decelerating craft or vehicle. This revolutionary system was recently awarded US patent #7,468,681.

Available as an OEM and aftermarket retail product, the patented Safety Alert System warning light assembly includes an electronic

-more-

microprocessor controlled G force sensor. As a vehicle decelerates, the module emits a signal to illuminate the rear-installed LED, helping surrounding operators take timely corrective action and avoid collisions.

"What better cause can this company be associated with than helping to reduce injuries, fatalities, damage, costly repairs and downtime to outdoor recreation enthusiasts," said PWC Industries CEO and president Paul Grzebielucha. "We're dedicated to manufacturing dependable, high-quality and easy-to-install products for our customers, the Safety Alert System is no exception."

Not just water resistant but, completely water- and vibration-proof, the Safety Alert System is built to endure harsh environmental conditions with an Urethane encapsulated circuit board. Offering a low voltage draw of just 170 milliamps, its bright and clear LED will last up to 100,000 hours. The Safety Alert System comes with all necessary high-quality wiring and features a compact design.

As an added safety precaution, the system doubles as a distress signal, allowing the LED to flash and alert others of needed assistance. This is especially beneficial when tow boats are trying to locate a specific vessel requiring help.

Marine kits include a high-intensity, panel LED that mounts on the dash. It flashes simultaneously with the rear array, letting users know the system is operating properly. With built-in, fail-safe circuitry, users will always know the system is working to protect them.

Applicable for small and large boats, personal watercraft and land-based vehicles such as ATVs, motorcycles, trailers, automobiles and snowmobiles, the Safety Alert System comes with an amazing three-year

unconditional manufacturer's replacement warranty. Available in multiple modern styles and shapes, the system has a starting retail price of only \$238.95.
